

What is claimed is:

1 A system for capturing resources in broadcast and data  
communication in a unification mode, wherein a broadcast stream  
5 can be captured from resources in broadcast and resources in  
communication, said system employing a unified notation system  
being independent of a capture route, a capture time and an  
inherent name, to capture said broadcast stream.

10 *Sub AB* 2 The resource capturing system defined in claim 1, wherein  
said unified notation system comprises a broadcast station  
code, a broadcast start time and a broadcast end time.

3 The resource capturing system defined in claim 1, wherein  
said broadcast stream is a TV broadcast program.

15 4 The resource capturing system defined in claim 1, wherein  
said broadcast stream is a radio broadcast program.

5 The resource capturing system defined in claim 1, wherein  
said broadcast stream is an Internet broadcast program.

20 6 The resource capturing system defined in claim 1, further  
comprising route selection for capturing said broadcast stream,  
said route selection being uniquely decided dependent on a  
broadcast time of said broadcast stream.

25 7 The resource capturing system defined in claim 6, wherein  
when the broadcast time of said broadcast stream includes at  
the same time a past zone, a future zone, and a current zone  
inserted between said past zone and said future zone, a zone

for a period between a current time and the end of a future time is received using a broadcast resource receiver while the past zone is received using a communication resource receiver.

8 The resource capturing system defined in claim 6, wherein said broadcast stream is a TV broadcast program.

9 The resource capturing system defined in claim 6, wherein said broadcast stream is a radio broadcast program.

10 The resource capturing system defined in claim 6, wherein said broadcast stream is an Internet broadcast program.

11 The resource capturing system defined in claim 1, wherein an arbitrary portion of said broadcast stream is cut and then transferred onto a communication route.

12 The resource capturing system defined in claim 11, wherein said broadcast stream is a TV broadcast program.

13 The resource capturing system defined in claim 11, wherein said broadcast stream is a radio broadcast program.

14 The resource capturing system defined in claim 11, wherein said broadcast stream is an Internet broadcast program.
